Hottest new services in DIGITAL.CSIC: DIGITAL.CSIC 2016 International Open Access Week
Digital.CSIC Technical Office
October 24th, 2016

**HOTTEST NEW SERVICES IN DIGITAL.CSIC**

**Open reviews**
This module allows end-users to publish peer reviews and comments about any type of research outputs available in open access in DIGITAL.CSIC. More information at [http://digital.csic.es/handle/10261/131210](http://digital.csic.es/handle/10261/131210)

**Support to comply with Open Access and Open Data mandates**
DIGITAL.CSIC is enhancing its services to help comply with the growing number of funders’ open access mandates with an impact on CSIC projects. These services include the identification of mandates requirements and routes to enable open access as well as deposit, description and dissemination of projects results through DIGITAL.CSIC.

**Advise on open licenses for publications and research data**
Selecting an open access license has important implications on the future reuse of research outputs. DIGITAL.CSIC provides support to understand the wide range of available licenses.

Compliance with journals open data policies

More and more journals have an open data policy whereby authors are requested to deposit their articles’ underlying data in repositories for peer review and open access purposes. DIGITAL.CSIC is included in the Re3Data registry as a trustworthy repository for research data.

CSIC authors index

This service identifies and marks authors of CSIC outputs on the repository’s authors index.

Training about data management and visualization

DIGITAL.CSIC Technical Office provides hands-on training and other capacity building resources on how to use free tools to curate, preserve and visualize research data.

CSIC researchers profiles

CSIC researchers may have a personal profile embedded in the repository and link it to their research outputs available in DIGITAL.CSIC and to value-added services including researchers network maps and usage statistics.

Open Access mandates tracker for CSIC projects

This search engine can be accessed from DIGITAL.CSIC intranet and identifies all CSIC projects under open access mandates by the European Commission, Spain’s State Research Plan 2013-2016 and Community of Madrid. The tool also provides with good practices to comply with the mandates.
Support to prepare Project proposals under Open Access mandates

DIGITAL.CSIC provides support to CSIC research teams that are requested to cover aspects related to funders’ open access mandates at the stage of project proposals writing.

DOI minting for datasets

DIGITAL.CSIC mints DOIs to all datasets that are submitted in open access. DOIs encourage a standard citation for datasets, help track their research impact and ensure long term accessibility.
