

Supporting Information

Formation of polymer nanoparticles by UV pulsed laser ablation of poly (bisphenol A carbonate) in liquid environment

Daniel E. Martínez-Tong^{1,+}, Mikel Sanz², Tiberio A. Ezquerra¹, Aurora Nogales¹, José F. Marco², Marta Castillejo², Esther Rebollar^{*2}

Figure S1. Mean diameter of nanoparticles as a function of the boiling temperature of the liquid media for PLAL.

Figure S2. Mean diameter of nanoparticles as a function of the density of the liquid media for PLAL.

Figure S3. Mean diameter of nanoparticles as a function of the viscosity of the liquid media for PLAL.

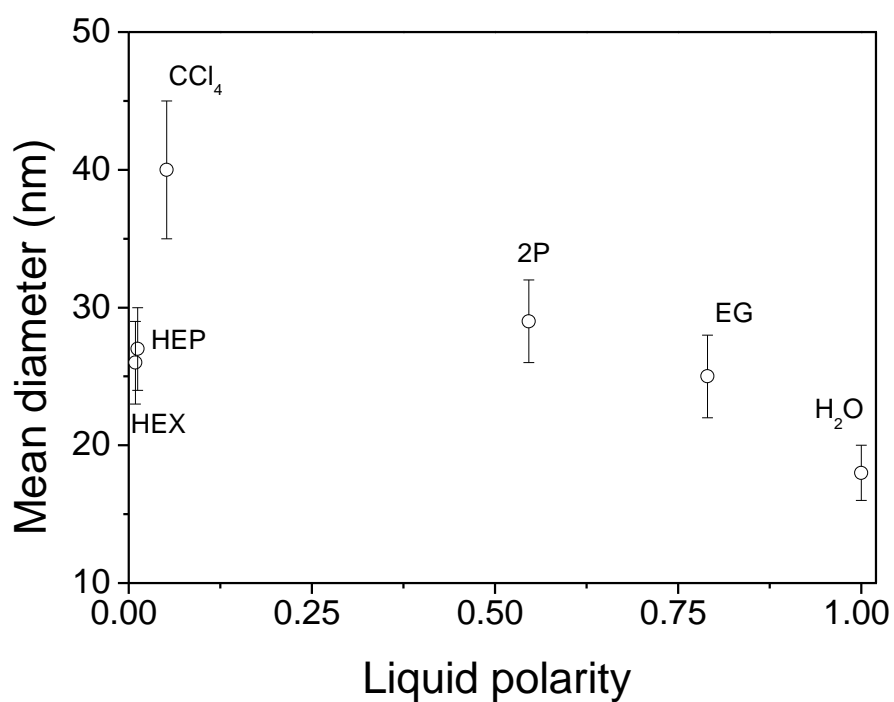

Figure S4. Mean diameter of nanoparticles as a function of the polarity (normalized E_T^N values) of the liquid media for PLAL.

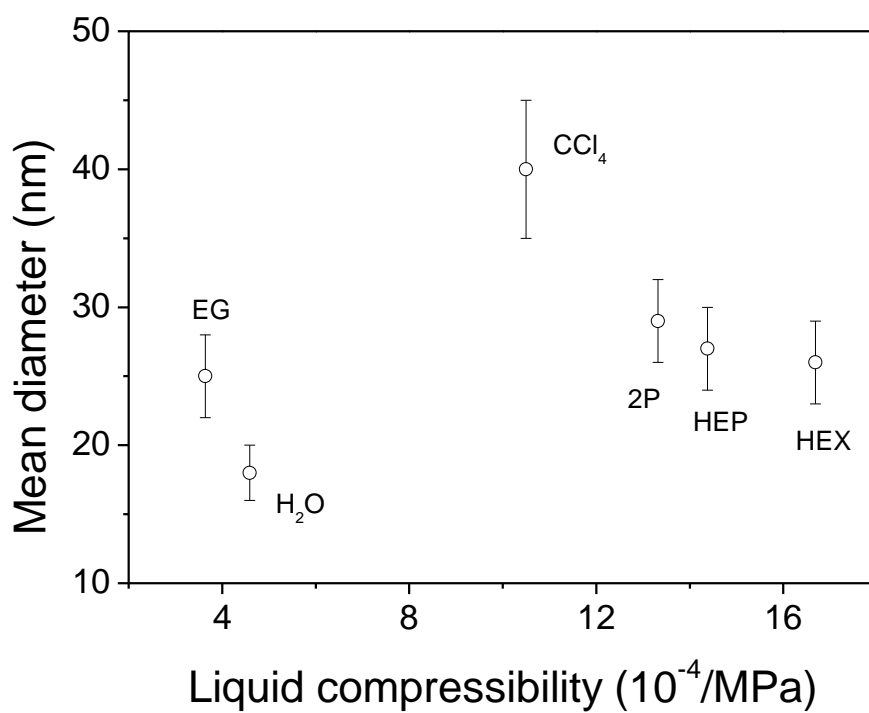

Figure S5. Mean diameter of nanoparticles as a function of the compressibility of the liquid media for PLAL.
