

Miguel G. Matias, A.J. Underwood, D.F. Hochuli and R.A. Coleman. Year. Independent effects of patch-size and structural complexity on diversity of benthic macro-invertebrates. *Ecology* VOL: pp-pp.

Appendix A – Photographs of experimental habitats are available in ESA’s Electronic Data Archive.

Figure A1. Photographs of three types of synthetic turfs (A, B or C) and experimental habitat (300 cm<sup>2</sup>) attached to the shore by four masonry nails and rubber washers (D). Note the minimal distance between each sub-habitat attached the wire mesh with individual cable ties.
