

Miguel G. Matias, A.J. Underwood, D.F. Hochuli and R.A. Coleman. Year. Independent effects of patch-size and structural complexity on diversity of benthic macro-invertebrates. Ecology VOL: pp-pp.

Appendix C – Figures showing mean abundances in habitats with different patch-size and type of structure are available in ESA’s Electronic Data Archive

Figure C1. Mean (+ S.E.) number of individuals in habitats with different a) patch-size and b) type of structure; bars with different patterns represent different types of structure: A (clear bars), B (hatched bars) and C (black bars).
