

# «LONGINOS NAVAS, CIENTIFICO JESUITA»: ADDITIONS AND CORRECTIONS TO THE EPHEMEROPTERA

M. D. Hubbard \*

## ABSTRACT

Ten genera and 71 species-level taxa described by Longinos Navás which were not included in J. J. Bastero Monserrat's valuable book, *Longinos Navás, Científico Jesuita*, are listed with appropriate citations. Thirty-seven publications by Navás dealing with Ephemeroptera are added to the list of Bastero Monserrat.

**Key words:** *Ephemeroptera, mayflies, Navás.*

## RESUMEN

### «Longinos Navás, Científico Jesuita»: Adiciones y correcciones a los Ephemeroptera.

Se enumeran, con las citas adecuadas, 10 géneros y 71 táxones de nivel especie descritos por Longinos Navás, que no fueron en su día incluidos en el meritorio libro *Longinos Navás, Científico Jesuita* de J. J. Bastero Monserrat. Se añaden 37 publicaciones de Navás que tratan de Ephemeroptera a la lista dada por Bastero Monserrat.

**Palabras clave:** *Ephemeroptera, efímeras, Navás.*

## INTRODUCTION

The Spanish scientist, Longinos Navás, published several hundred entomological papers between 1898 and 1936, dealing with almost every order of insects. No one knows exactly how many new taxa he described, but it was certainly more than 400 new genera and 3000 new species-level taxa. His works were scattered among dozens of journals and many of his type-specimens have been lost. Navás is renown for his brief and obtuse taxonomic descriptions throughout his prolific entomological career and has been an important source of frustration to many systematists, particularly in the neuropteroid orders in which he concentrated much of his efforts. Because of the number of taxa with which he worked, the lack of a comprehensive list of his publications and new taxa has been particularly vexing.

Juan Jesús BASTERO MONSERRAT, of the Colegio del Salvador de Zaragoza, Navás's former institution, has recently (1989) published a particularly valuable book, *Longinos Navás, Científico Jesuita*, which lists many of Navás's publications and new taxa. This

work will be invaluable to many entomological systematists. Unfortunately, even with access to the archives of the Colegio and many of Navás's original papers, Bastero Monserrat was unable to compile a complete list.

Compounding the difficulty in locating the scientific papers of Navás is lack of knowledge of the location of the type-specimens for his many species. Two papers recently published (ALBA-TERCEDOR & PETERS, 1985; DOMÍNGUEZ, 1989) have aided somewhat in relieving this problem by detailing information on his type-specimens deposited in the Museo de Zoología in Barcelona and in the entomological collections of Argentina.

In this paper, I add many new taxa (10 genera and 71 species) of Ephemeroptera described by Navás to the impressive list compiled by Bastero Monserrat and also list some of Navás's publications on Ephemeroptera not noted by him. In all probability, this list is still not complete and further taxa of Ephemeroptera and publications relating to them will come to light in the future. Nevertheless, ephemeropterists should find this information very useful.

\* Entomology, Florida A & M University, Tallahassee, Florida 32307, USA.

This paper is intended to be a supplement to Bastero Monserrat's work which should be referred to in using it. The format and abbreviations follow Bastero Monserrat with the addition of the following journal abbreviations:

**ANSEFRAN:** Annales de la Société Entomologique de France.

**FEJENAT:** Feuille des Jeunes Naturalistes.

**MEMUSPAR:** Memoires du Muséum National d'Histoire Naturelle (Paris).

Numbers in **boldface** refer to individual citation numbers of publications listed in Bastero Monserrat or included in this paper. Papers by Navás not included in Bastero Monserrat are listed here with subletters to indicate where their position should be in Bastero Monserrat's list.

This paper is one in a continuing series of catalogs of the Ephemeroptera (cf. HUBBARD & PESCADOR, 1978; HUBBARD & PETERS, 1978; HUBBARD, 1979, 1982a, 1982b, 1986, 1987, 1990; HUBBARD & SAVAGE, 1981).

- 309** (1917) *Rhithrogena diaphana* [spelled *diafana* by Bastero Monserrat]  
**508** (1930) *Siphlonella fazi* [placed in *Siphlonurus* by Bastero Monserrat]

## ACKNOWLEDGEMENTS

I thank Dr William L. Peters for allowing me access to his collection of Ephemeroptera literature and Dr Javier Alba-Tercedor for his help in the publication of this paper. Special thanks are due to Kerrie M. Swadling for her help in organizing the literature involved in this project.
